

Improved surface quality:

## Post-processing of additively manufactured components

Are you also faced with the problem of how to improve the internal surfaces of your 3D components? Whether it's individual parts, prototypes or small to medium-sized series – they all generally require a significant improvement in surface quality.

**We have the solution: Abrasive Flow Machining.**

**Let us work together to develop the optimum finishing process for your individual components.**

*Internal surface of a 3D component before Abrasive Flow Machining.*

*Internal surface of a 3D component after Abrasive Flow Machining.*

### Abrasive Flow Machine Comfort Line

#### Your benefits:

- + Excellent results with metals/ metal alloys
- + Plastics and other materials upon request
- + Machining from an inside diameter of 2 mm, smaller diameters upon request
- + Advice in advance on the influence of component geometry on post-processing options

## Everything from a single source

Take advantage of the **synergy effects** that result from our integration into the **Pütz Group!** In addition to surface finishing technologies as well as industrial cleaning technologies, we can also offer you the right testing technology to test surfaces and dimensional accuracy.

### We offer comprehensive services and know how:

#### Surface finishing technologies

Abrasive Flow Machining  
Vibratory finishing  
Subcontracting  
Streamer production  
Construction and manufacture of AFM machines  
Test processing of individual pieces and prototypes

#### Industrial cleaning technologies

Spray washing  
Immersion cleaning  
Ultrasonic cleaning  
High-pressure cleaning  
Spear and wear parts
