Streamer

Your custom-tailored abrasive medium for perfect surfaces

QUALITY MADE IN GERMANY
Special machines for your production

Every workpiece is unique. Every machining task places different demands on surface finish, tolerances and efficiency. So why settle for a standard solution when it comes to abrasive flow machining?

We believe that the abrasive medium should adapt to the workpiece – not the other way around! That‘s why we develop and manufacture our Streamer individually, ensuring it is optimally tailored to your specific application.

Before production begins, we take the time to understand your needs: Together, we carefully analyze your workpiece geometry, material properties, machine parameters and machining objectives. Only when all factors have been carefully aligned do we produce your customized Streamer.

The result is a high-performance abrasive medium precisely tailored to the requirements of your abrasive flow machining process.

Let‘s work together to develop the ideal Streamer for your machining application.

Your benefits at a glance:

- **Customized formulation**
  Individually tailored to the workpiece, material, and machining requirements
- **Consistently high surface quality**
  Reliable and repeatable machining results
- **High cost-effectiveness**
  Long service life and reduced processing times
- **Application-specific viscosity**
  Adapted to different geometries and machining requirements
- **Flexible abrasive selection**
  Various abrasive grains and multi-grain mixtures
- **Optimal process integration**
  Consideration of machine and process parameters

Complex geometries. Precise results.

Processing options

- Processing of complex internal geometries
- Deburring of hard-to-reach bores as well as crevices, grooves and edges
- Consistently and evenly rounded edges
- Improvement of the surfaces of additively printed components
- Polishing of machined or cast surfaces
- Removal of martensite layers, for example after eroding

Our new ticket system for support requests

Our new ticket system for support requests is now available – especially for urgent matters such as machine downtime or technical malfunctions.

Your request will be recorded in a structured format and forwarded directly to the appropriate specialist team. This allows us to process requests more quickly, ensure transparent workflows, and reduce response times.
